Part 5 - Instructions.....	7
Part 6 - Installing WebSphere Integration Developer v6.2.....	8
Part 7 - Verification of the installation of WID 6.2.....	14

Part 1 - Minimum Hardware Requirements

- 1000 Mhz Pentium III
- 1.5 GB RAM minimum, 2 GB recommended
- 10 GB free on the C drive
- Network connectivity to the internet
- USB Port

Part 2 - Minimum Software Requirements

- Microsoft Windows 2000 SP4 or Windows XP (SP1 or SP2)
- Adobe Acrobat Reader 6.0
- Winzip 8
- Internet Explorer 6.0
- WebSphere Integration Developer 6.2*

* - indicates software provided as part of the courseware.

Part 3 - Software Provided

Number of USB memory sticks that you will receive: **2**

Name of the files containing in the memory sticks (one file per memory stick):

- **WA1798_1.ZIP**
- **WA1798_2.ZIP**

All other software listed under Minimum Software Requirements is either commercially licensed software that you must provide or software that is freely available off the Internet.

Part 4 - Important Ghosting or Imaging Information

Some of the software installed for this course will not function after changing the computer hostname. As such, cloning or imaging should not be used on a fully installed system.

You can save time by extracting the contents of the USB memory stick to C:\ on a clean OS install (no other software installed) and then imaging that hard drive. After restoring the image to the other computers and changing the hostnames, you can then install the software on each computer individually by following the instructions that are detailed later in this document.

Part 5 - Instructions

__1. From a USB memory stick, extract the **WA1798_1.ZIP** file to **C:**

__2. From a USB memory stick, extract the **WA1798_2.ZIP** file to **C:**

__3. Review that the following folders were created:

- **C:\LabFiles**
- **C:\Software**
- **C:\Software\WID6.2**

Part 6 - Installing WebSphere Integration Developer v6.2

Warning: You cannot use ghosting or disk imaging to install this software. You must install the software on each machine separately. Do not change the computer hostname after this software is installed. Also, do not install this software from a network share. It will only function partially if you do.

Approximately time for installation of WID 6.2: 60 minutes

__1. From C:\Software\WID6.2\disk1, run **launchpad.exe**

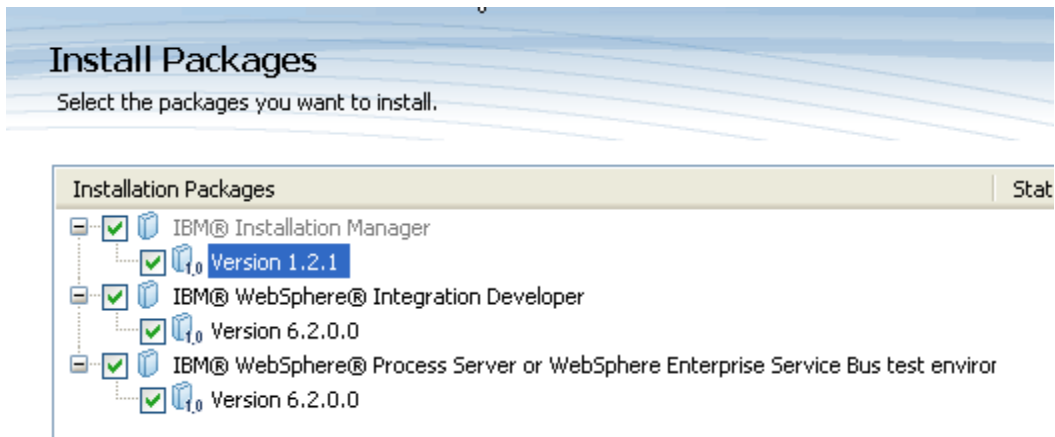

__2. Select **English** and click **OK**.

The Software Development Platform page will open.

__3. Click on **Install IBM WebSphere Integration Developer V6.2**

The Install Packages page will open.

__4. Leave all the defaults selected as shown above and click **Next**.

__5. Accept the license terms and click **Next**.

__6. Leave the default directories for the Shared Resources and Installation Manager and click **Next**.

Install Packages

Select a location for the shared resources directory and a location for Installation Manager.

Install Licenses **Location** Features Summary

When you install packages, files are stored in two locations:

- 1) The shared resources directory - resources that can be shared by multiple packages.
- 2) The installation directory - any resources that are unique to the package that you are installing.

Important: You can only select the shared resources directory the first time you install a package. The installation directory can be changed at any time. The shared resources directory must have adequate space for the shared resources of future packages.

Shared Resources Directory:

Once installed, IBM Installation Manager will be used to install, update, modify, manage and uninstall the software.

Installation Manager Directory:

The Installation directory for WID will open.

__7. Change the installation location to **C:\WID62**

Install Packages

A package group is a location that contains one or more packages. Some packages can be installed into a common package group, an existing package group, or create a new one.

Install > Licenses > **Location** > Features > Summary

Use the existing package group
 Create a new package group

Package Group Name	Installation Directory
IBM WebSphere Integration Developer	C:\WID62

Package Group Name: IBM WebSphere Integration Developer
Installation Directory: C:\WID62

Details
Shared Resources Directory: C:\Program Files\IBM\SDPShared

Disk Space Information

Volume	Available Space
C:	13.62 GB

Important: You must make this change. The default installation location is too long and will cause problems with the functionality of the product.

__ 8. Click **Next**.

__ 9. Leave the default language and click **Next**.

The features to install page will open.

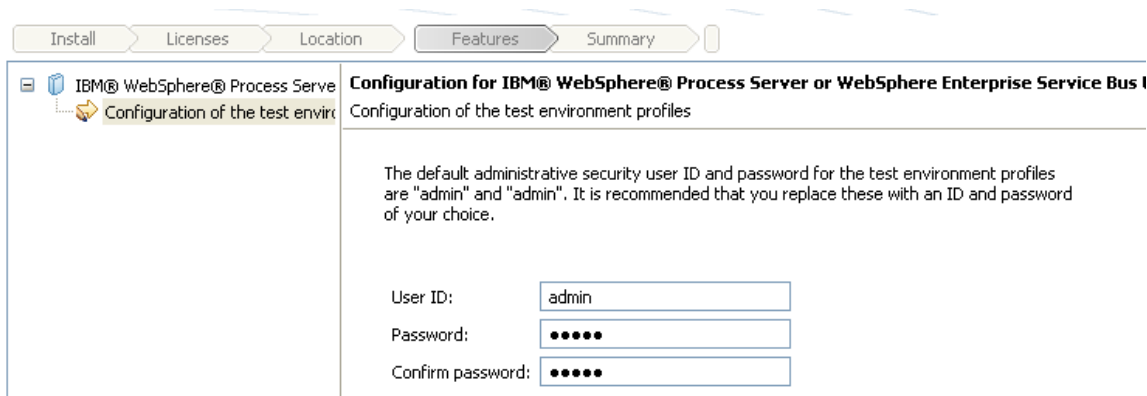

__ 10. Expand the **IBM WebSphere Process Server or WebSphere Enterprise Service Bus test environment 6.2.0.0**.

__ 11. Make sure **IBM WebSphere Process Server profile** is checked and **IBM WebSphere Enterprise Service Bus profile** is unchecked, as shown below.

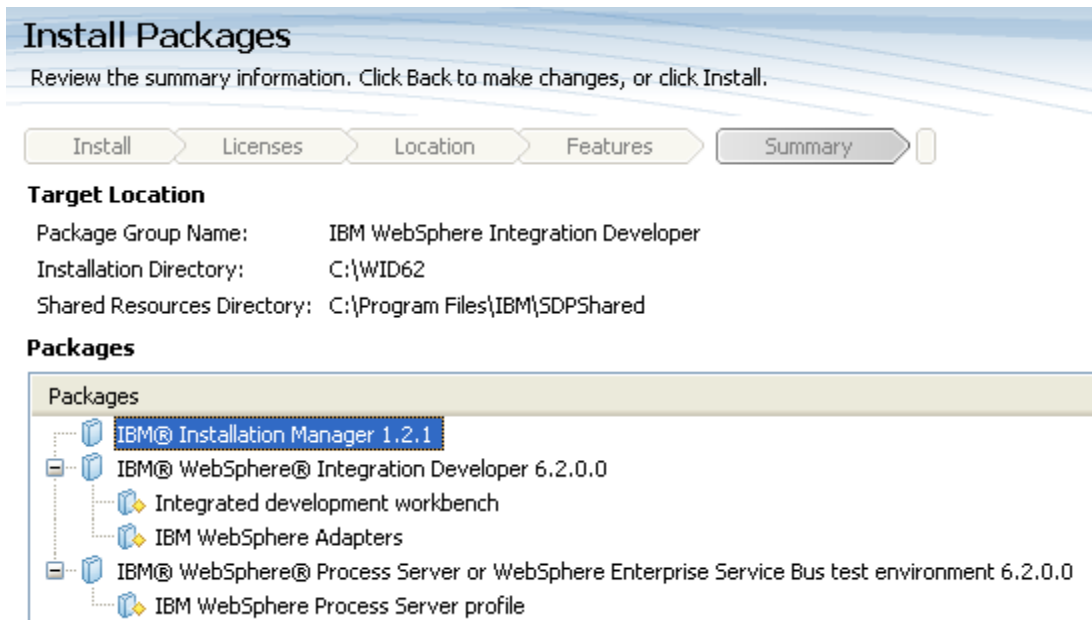

__12. Click **Next**.

__13. Leave the **User ID** and **Password** as **admin** in the configuration of the Enterprise Service Bus page as shown below and click **Next**.

The Summary page will open.

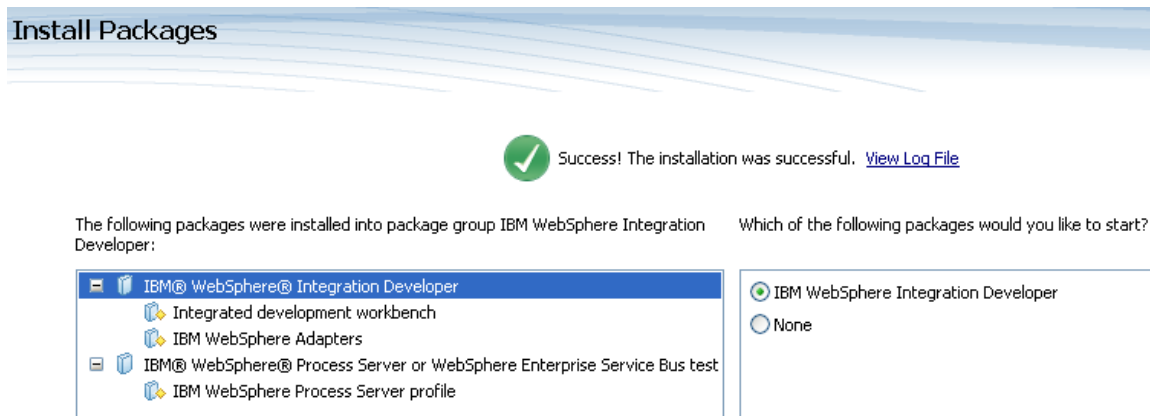

__14. Click **Install**.

Installation will start.

When the installation is done you will see this page:

__15. Select **None**.

Which of the following packages would you like to start?

__16. Click **Finish**.

__17. Close the Software Development Platform window.

Part 7 - Verification of the installation of WID 6.2

__1. Open C:\WID62\runtimes\bi_v62\logs\install\log.txt.

__2. Go to the end of the file. Make sure that you see the message: **INSTCONFSUCCESS** as shown below:

```
l.ni.ismp.actions.ConfigureAction, msg1, Running configuration command: 9/5/11  
l.ni.ismp.actions.SetLeniRegistryAction, msg1, Current install/uninstall  
l.ni.ismp.actions.SetExitCodeAction, msg1, CWUPI0000I: EXITCODE=0  
l.ni.ismp.actions.ISMPLogSuccessMessageAction, msg1, INSTCONFSUCCESS
```

__3. Close the file.

__4. Launch WID using the following Windows start menu: **Start->All Programs ->IBM WebSphere Integration Developer->IBM WebSphere Integration Developer V6.2->WebSphere Integration Developer V6.2.**

__5. Change the workspace to C:\workspace as shown below.

__6. Click **OK**.

__7. The Welcome window will open. Close it.

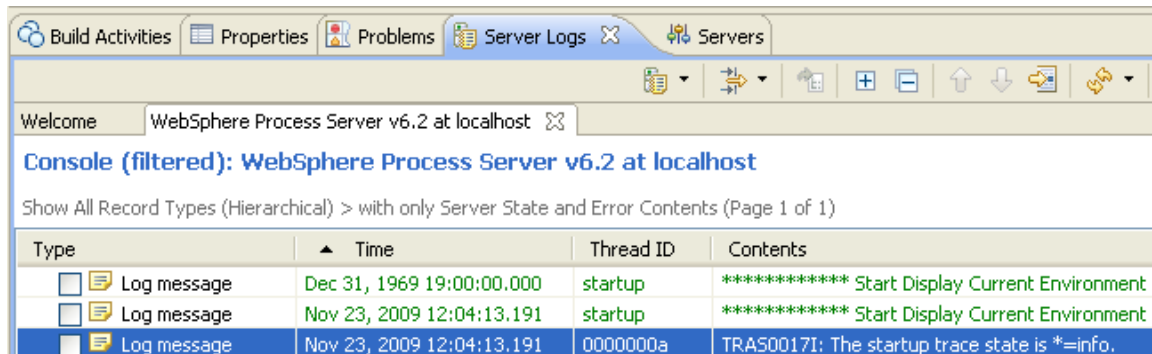

__8. At the bottom of the screen, click on the **Servers** tab.

__9. Right click the **WebSphere Process Server v6.2 at localhost** and select **Start**.

__10. The **Server Logs** view will open showing some messages during the start.

__11. After the server finishes starting, which can take several minutes, the **Servers** view will show the state of the server as **Started** and its status as **Synchronized**.

__12. Select the server and stop it by clicking on the **Stop the server** button.

__13. Wait for the server to stop. Stopping the server is much faster than starting the server. Once the server is stopped, the state will change to **Stopped**.

__14. Exit WID by choosing **File->Exit** from the menu bar.

__15. Close all the open files.

Congratulations! The product has successfully been installed.
