

To install Tomcat 4.1.18

- ___ 1. Download the zip file from **www.webagesolutions.com/download/ jakarta-tomcat-4.1.18.zip using the username and password access2.**
- ___ 2. Unzip the file into <drive>\temp. This will create a new subdirectory named **jakarta-tomcat-4.1.18.**
- ___ 3. Move the contents of the **jakarta-tomcat-4.1.18** to <drive>\tomcat.
- ___ 4. From the Control Panel, select **System**, the **Advanced** tab and then **Environment Variables**. Add the following new environment variable to point to the root directory of your Tomcat hierarchy:

Variable Name: CATALINA_HOME
Variable Value: <drive>\tomcat

Make sure you do not place a \ after tomcat.

- ___ 5. Add the following new environment variable, **JAVA_HOME**, to point to the root directory of your JDK hierarchy:

Variable Name: JAVA_HOME
Variable Value: <drive>\jdk1.3.1_08

- ___ 6. Set the environment variable, **CLASSPATH**, to point to the root directory of your class files you will create. I.e., set it to:

<drive>\tomcat\common\lib\servlet.jar;

- ___ 7. Start Tomcat using the **<tomcat install>\bin\startup** command. Open a Command Prompt window, change the directory prompt to

<drive>\tomcat\bin>

and enter

startup

- ___ 8. Open a web browser, such as Internet Explorer or Netscape Navigator, and go to **http://localhost:8080**. You should see a web page with the Tomcat logo at the top.

Stop Tomcat using the **<tomcat install>\bin\shutdown** command.
