Part 7 - Verification of JDK 7 Update 45.....	11
Part 8 - Verification of Eclipse Kepler.....	14
Part 9 - Summary.....	15

Part 1 - Minimum Hardware Requirements

- CPU to meet the minimum requirements of the operating system being used
- 2 GB RAM minimum, 3 GB recommended
- 15 GB in the hard disk
- USB port

Part 2 - Minimum Software Requirements

- One of the following Windows versions:
 - Windows Vista (Business, Enterprise, or Ultimate)
 - Windows 7 (Professional, Enterprise, or Ultimate)
 - Windows Server 2008
 - Windows 8
- One of the following web browsers:
 - Internet Explorer 9 or higher
 - Latest Firefox
 - Latest Chrome
- Adobe Acrobat Reader
- Zip extraction utility
- JDK 7 Update 45 *
- Eclipse IDE for Java EE Developers – Kepler *
- Derby_10.7.1.1 *

* - indicates software provided as part of the courseware.

Part 3 - Software Provided

You will receive the following file:

- **WA1278.ZIP**

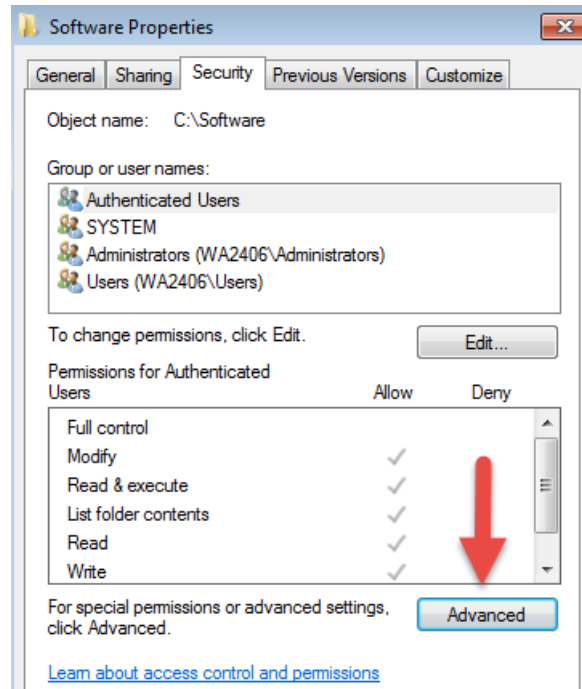

All other software listed under Minimum Software Requirements is either commercially licensed software that you must provide or software that is freely available off the Internet.

Part 4 - Preparation

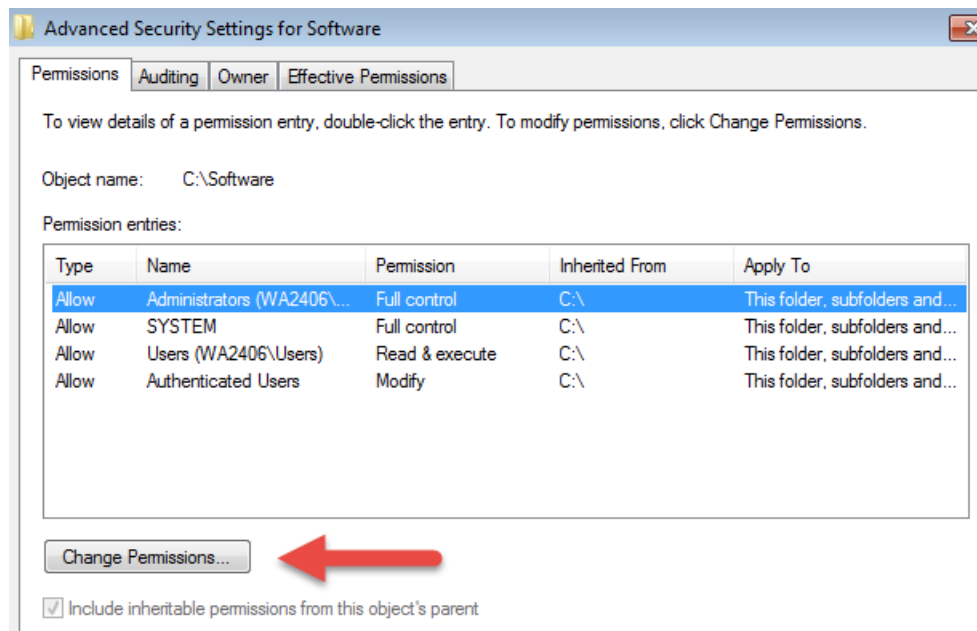

- __1. Extract the **WA1278.ZIP** file to **C:**
- __2. Review that the following folders were created:
 - **C:\LabFiles**
 - **C:\Software**
 - **C:\Software\db-derby-10.7.1.1-bin**
 - **C:\Software\eclipse**
- __3. Review that the following files were created:
 - **C:\Software\jdk-7u45-windows-i586.exe**

Part 5 - Privileges to Users

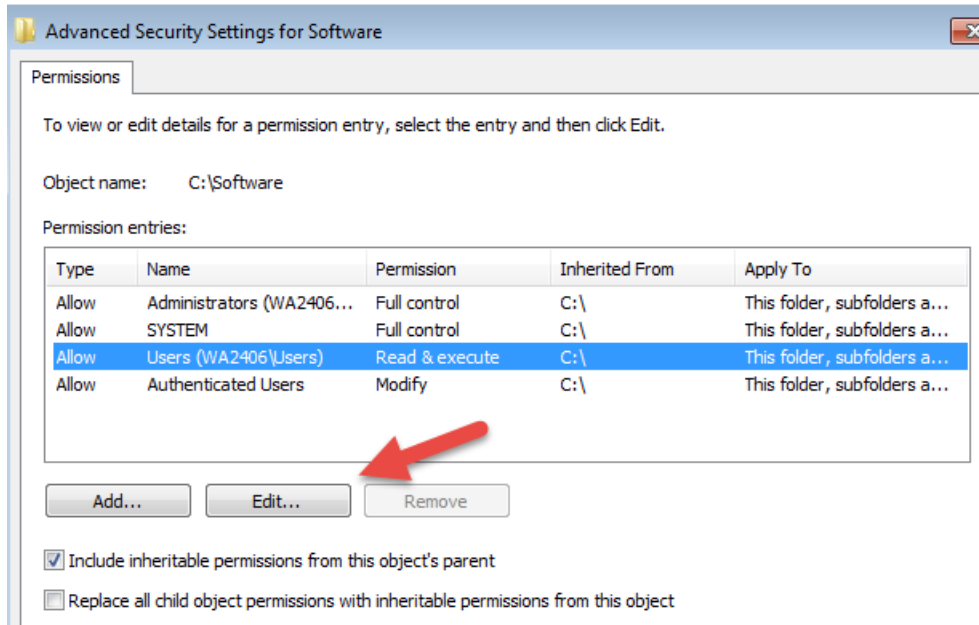

- __1. Create the user that the students will use during the class.
- __2. Open Windows Explorer.
- __3. Right click **C:\Software** and select **Properties**.
- __4. Click the **Security** tab.
- __5. Click **Advanced**.

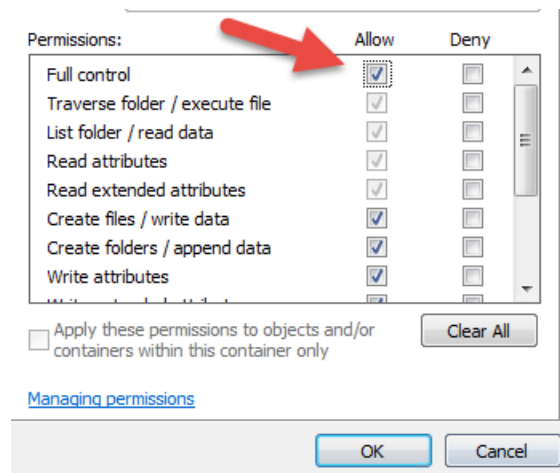

6. Click **Change Permissions**.

7. Select the **Users** entry (**add one if not present**) and click **Edit...**

__8. Check the **Allow** checkbox to the right of **Full Control** and click **OK**.

__9. Select the checkbox for **Replace all child permissions with inheritable permissions from this objects** and then click **OK**.

- Include inheritable permissions from this object's parent
- Replace all child object permissions with inheritable permissions from this object

- __10. A *Windows Security* dialog will open. Click **Yes**.
- __11. Wait until Windows finishes updating security.
- __12. Back in the *Advanced Security Settings* dialog, click **OK**.
- __13. Back in the *Properties* dialog, click **OK**.
- __14. Do the same steps to the **C:\LabFiles** folder.
- __15. Create a folder called **C:\Workspace** if its not already created.
- __16. Do the same steps to the **C:\Workspace** folder.

Part 6 - Installing JDK 7 Update 45

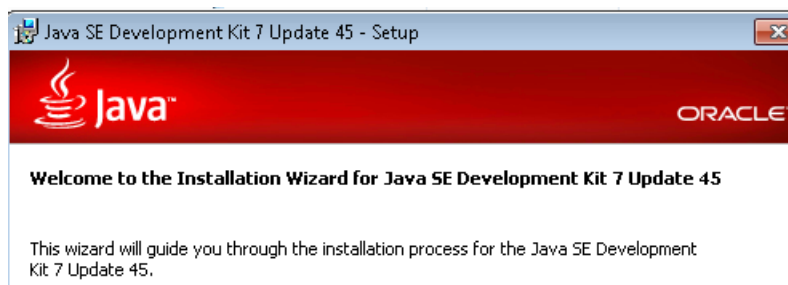

__1. Make sure there is no previous Java version already installed on the system. You can check this by using the Windows “Add/Remove Programs” utility. For the best compatibility with the labs it is suggested that all previous versions of Java be uninstalled before proceeding with these instructions. If this is an issue, please contact the setup support person for the course.

__2. From the **C:\Software** directory run the following file:

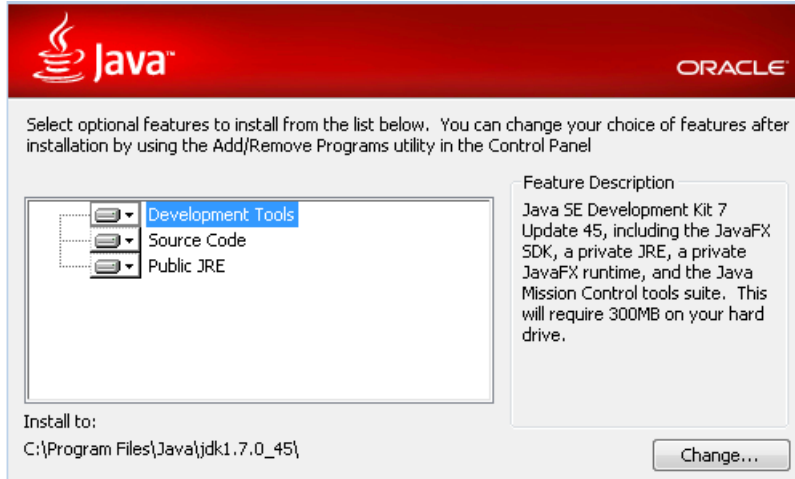

`jdk-7u45-windows-i586.exe`

Note: If using prompted by a security prompt allow the installation to continue.

__3. When the initial step of the setup appears, press the **Next** button.

__4. Leave the defaults for installation location and options, and press the **Next** button.

Note: The installation directory may be slightly different for example
C:\Program Files (x86)\Java\jdk1.7.0_45

The installation will begin installing files.

5. The Destination Folder will appear, leave the default folder and click **Next**.

Note: The installation directory may be slightly different for example
C:\Program Files (x86)\Java\jdk1.7.0_45

Wait until the software is completely installed.

__6. Click **Close**.

__7. Close any browser that appears asking to register the JDK software.

Set the Environment variables.

__1. Open a Command Prompt. You can do this with '**Start → Programs → Accessories → Command Prompt**'.

__2. Use the 'cd' command to attempt to switch to the following directory. This will verify the presence of a directory used later so make sure you do not get any errors about not being able to “find the path specified”.

```
cd C:\Progra~1\Java\jdk1.7.0_45
```

```
C:\Users\wasadmin>cd C:\Progra~1\Java\jdk1.7.0_45
C:\PROGRA~1\Java\jdk1.7.0_45>_
```

Note: The installation directory may be slightly different depending your operating system. You may need to use the following directory instead of the one listed above:

C:\Progra~2\Java\jdk1.7.0_45

Some of the remaining steps will use the slightly different directory.

__3. Make sure you can reach the java folder and remember the value entered because you will use this value in the following steps.

__4. Close the command prompt window.

__5. In the Windows Start Menu, right-click on the **Computer** link in the right-hand side of the Start panel, and then select **Properties**.

__6. Click on **Advanced system settings**.

__7. The system will display the **System Properties** dialog. Select the **Advanced** tab and click **Environment Variables**.

__8. Under the **System Variables** list, click the **New** button.

__9. Enter **JAVA_HOME** as Variable name.

__10. As Variable value enter the following. This should be the value you verified in the *Set the Environment variables section - step 2*.

C:\Progra~1\Java\jdk1.7.0_45

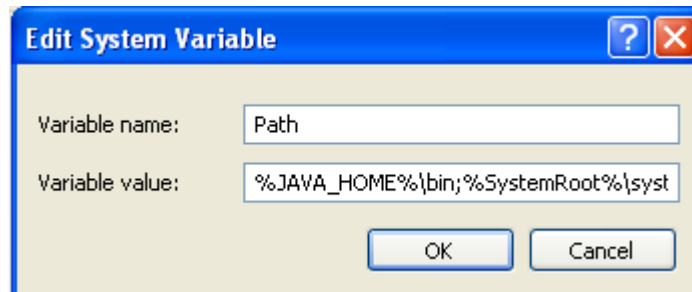

Note: If you are using a 64-bit OS you may have to use **C:\Progra~2\Java\jdk1.7.0_45**

__11. Click **OK** to create the variable.

__12. From the *System Variables* list, select **Path** and click **Edit**.

__13. At the beginning of the line enter the following. Make sure to include the semi-colon on the end:

`%JAVA_HOME%\bin;`

__14. Click **OK**.

__15. Click **OK** to close the *Environment Variables* window.

__16. Click **OK** to close the *System Properties* window.

Part 7 - Verification of JDK 7 Update 45

__1. Open a Windows command prompt. You can do this by selecting '**Start -> Run**', entering '**cmd**', and then pressing the **OK** button. Make sure it is a new command prompt and not one open previously.

__2. Enter the following command:

```
echo %PATH%
```

Make sure you see the Java 'bin' directory listed at the beginning as shown below.

```
C:\Users\wasadmin>echo %PATH%
C:\Progra~1\Java\jdk1.7.0_45\bin;C:\Windows\system32;C:\Windows\system32\Wbem;C:\Windows\System32\WindowsPowerShell\v1.0\
C:\Users\wasadmin>_
```

Note: You may see `C:\Progra~2\Java\jdk1.7.0_45`

__3. Enter the following command:

```
java -version
```

Make sure you see the response shown below.

```
C:\Users\wasadmin>java -version
java version "1.7.0_45"
Java(TM) SE Runtime Environment (build 1.7.0_45-b18)
Java HotSpot(TM) Client VM (build 24.45-b08, mixed mode, sharing)
```

Troubleshooting: If you get an error message means that your Environment variable was incorrectly entered, go back and fix the values.

__4. Enter the following command:

`javac`

Verify that you get the options to run the Java compiler:

```
C:\Users\wasadmin>javac
Usage: javac <options> <source files>
where possible options include:
-g                Generate all debugging info
-g:none          Generate no debugging info
-g:{lines,vars,source} Generate only some debugging info
-nowarn          Generate no warnings
-verbose         Output messages about what the compiler is doing
```

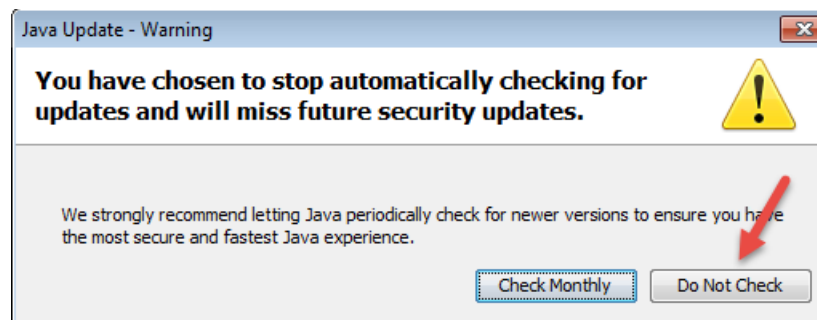

__5. Close the command prompt window and any extra windows that are open.

__6. From Start, select **All Programs > Java > Check for Updates**.

__7. Select the **Update** tab.

__8. Un-check the **Check for updates automatically** check box.

__9. A popup will open, click **Do not check**.

__10. Make sure the box is not checked and click **OK**.

__11. Click **OK** to close the Java Control Panel.

Java has been installed.

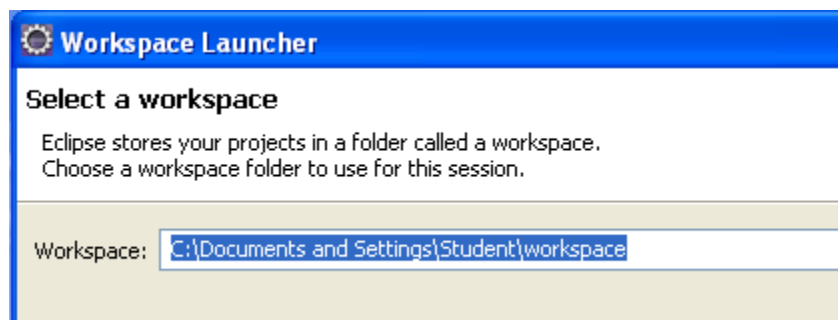

Part 8 - Verification of Eclipse Kepler

__1. Run C:\Software\eclipse\eclipse.exe

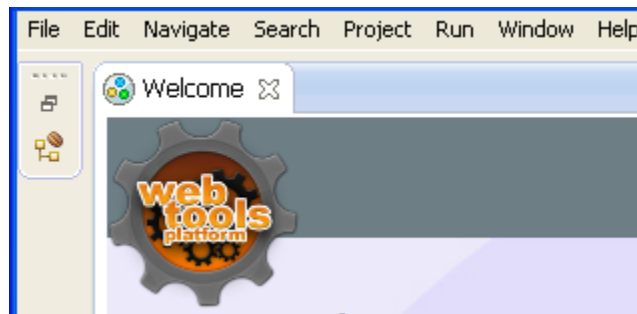

Eclipse Kepler will start.

__2. A Workspace Launcher dialog will appear. Leave the default workspace directory and click **OK**.

Eclipse will open showing the Welcome page. (The Welcome screen may vary between versions).

__3. From the menu, select **File** > **Exit** to close Eclipse. Confirm you want to exit Eclipse if prompted.

Eclipse Kepler is working fine.

Part 9 - Summary

You have successfully installed the software for this course!
