Part 1 - Minimum Hardware Requirements

- 1000 MHz Pentium IV
- 1GB RAM minimum
- 4 GB free in the hard disk
- Sound card
- Speakers
- Internet connection

Part 2 - Minimum Software Requirements

- OS: Windows XP SP2 or later, Windows Vista, or Windows 7.
- Apache Web Server 2.2.14 *
- Latest version of **Chrome** web browser. This is available from www.google.com/chrome.

* - indicates software provided as part of the courseware.

Part 3 - Software Provided

You will receive the following file:

- **WA1925.ZIP**

All other software listed under Minimum Software Requirements is either commercially licensed software that you must provide or software that is freely available off the Internet.

Part 4 - Important Ghosting or Imaging Information

The software for this course can be ghosted.

Part 5 - Instructions

- __ 1. Create a user called **wasadmin** with password **wasadmin** and grant this user administrative access and then restart the computer and log in as **wasadmin**.
- __ 2. Install the latest version of Chrome web browser from **www.google.com/chrome**.
- __ 3. Extract the **WA1925.ZIP** file to **C:**
- __ 4. Review that the following folders were created:
 - **C:\LabFiles**
 - **C:\Software\Apache**

Part 6 - Installing Apache HTTP Server 2.2.14

- __1. Login as the administrative ID created for the class.
- __2. Run **apache_2.2.14-win32-x86-no_ssl.msi** from the **C:\Software\Apache** folder.
- __3. In the Welcome screen, click **Next**.

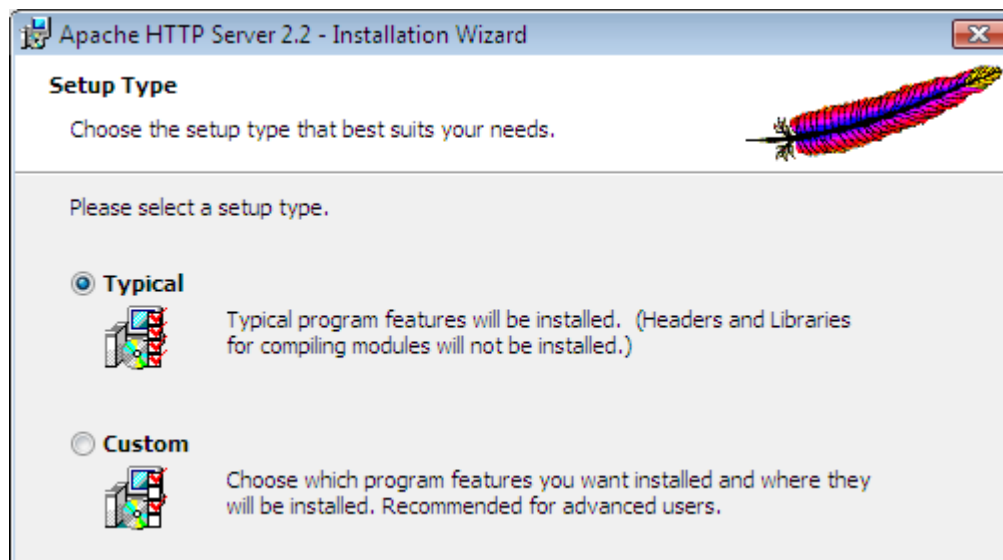

- __4. Accept the License Agreement and click **Next**.
- __5. In the *Read This First* page, click **Next**.
- __6. Enter **localhost** for **Network Domain** and **Server Name**. Enter **webmaster@localhost** for **Administrator's E-mail Address** as shown below.

__7. Click the **Next** button.

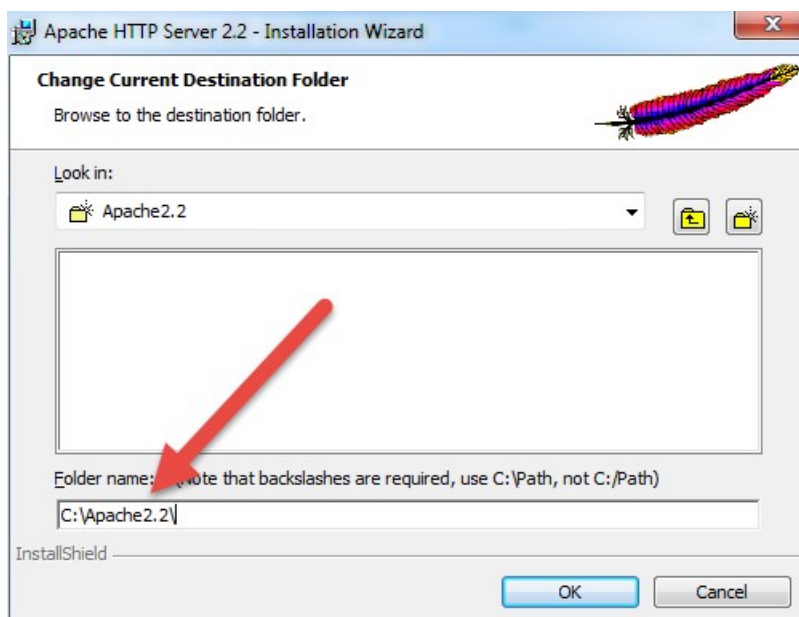

__8. Select **Typical** installation and click **Next**.

__9. Click the **Change** button to change the destination folder.

__10. Then change the **Folder name** to **C:\Apache2.2** and click **OK**.

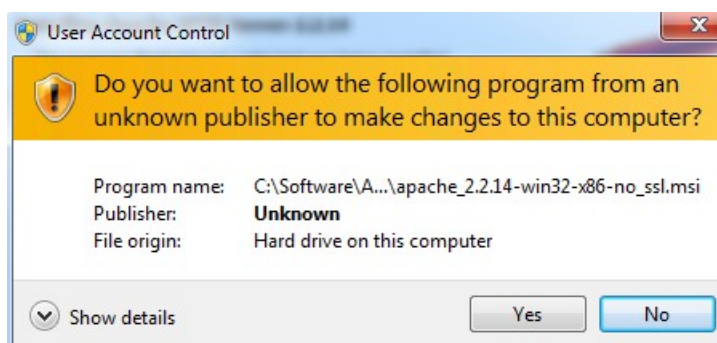

__11. Back in the *Destination Folder* page, confirm the new folder name (**C:\Apache2.2**) and click **Next**.

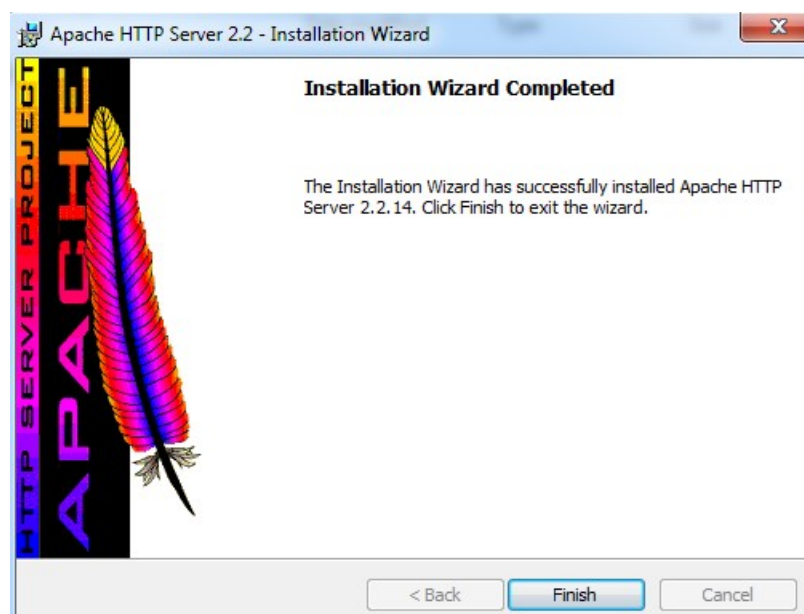

__12. Click **Install** to start the installation.

__13. If prompted by Windows security, click **Yes** to allow the installation to proceed.

__14. When the *Installation Wizard Completed* message appears, click **Finish**.

__15. Verify that the Apache Server is running on the task bar of Windows.

__16. Open a browser and type:

http://localhost

__17. Verify you see the message: **It works!**

Apache HTTP Server 2.2.14 is installed.

Part 7 - Modify File Permissions (Windows Vista, Windows 7, Windows Server 2008, or Windows 8)

Note: If installing on Windows Vista, Windows 7, Windows Server 2008, or Windows 8 perform this section. Failure to follow these additional steps will lead to an unusable installation. These steps allow full access to the directories used by the Apache Web Server install. This is required so that students can write to the document root.

__1. Open Windows Explorer.

__2. Right click C:\Apache2.2 and select **Properties**.

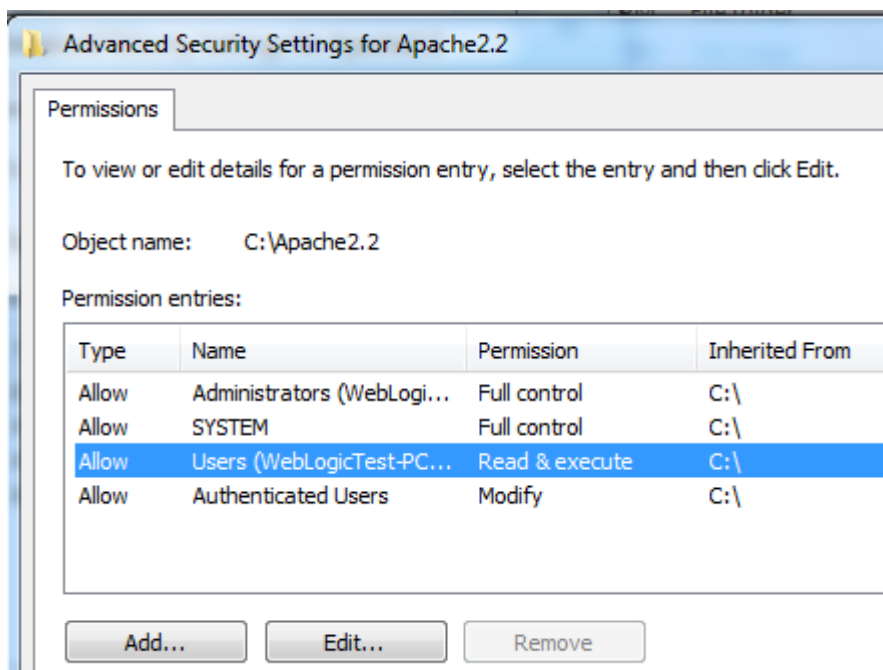

__3. Click the **Security** tab.

__4. Click **Advanced**.

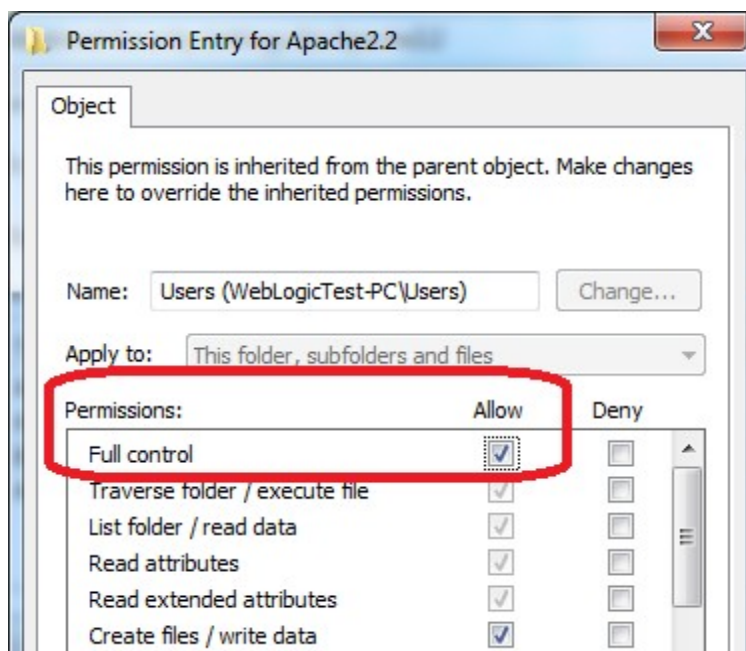

__5. Click **Change Permissions**.

__6. Select the **Users** entry (**add one if not present**).

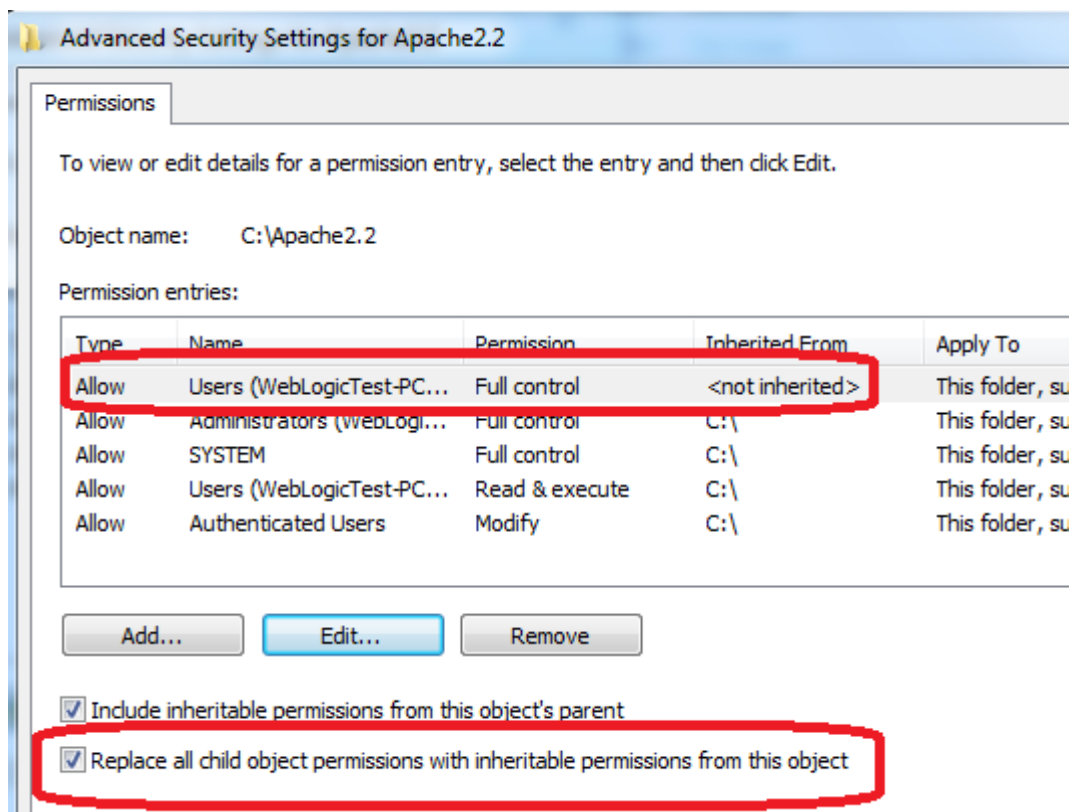

__7. Click **Edit...**

__8. Check the **Allow** checkbox to the right of **Full Control** and click **OK**.

__9. Select the checkbox for **Replace all child permissions with inheritable permissions from this objects** and then click **OK**.

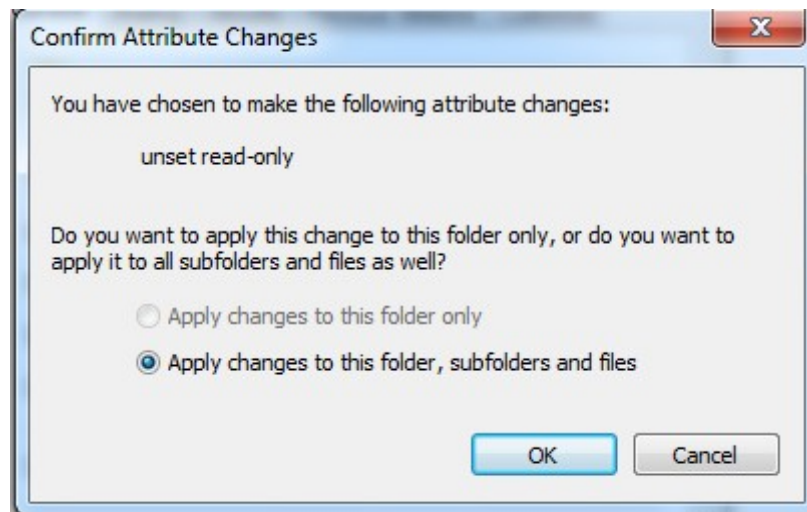

- __10. Click **OK** to continue.
- __11. A *Windows Security* dialog will open. Click **Yes**.
- __12. Wait until Windows finishes updating security.
- __13. Back in the *Advanced Security Settings* dialog, click **OK**.
- __14. Back in the *Apache2.2 Properties* dialog, click **OK**.
- __15. Right click C:**Apache2.2** and select **Properties**.
- __16. Uncheck the **Read-only** checkbox so files can be written to the directory.

__17. Click **OK**.

__18. In the *Confirm Attribute Changes* dialog, click **OK**, so the change will be applied to this folder, subfolder, and any files.

__19. Restart the computer and log in with the user that the student will use to do the labs.

__20. Make sure the user has full access to the **C:\Apache2.2\conf** and **C:\Apache2.2\htdocs** folders.

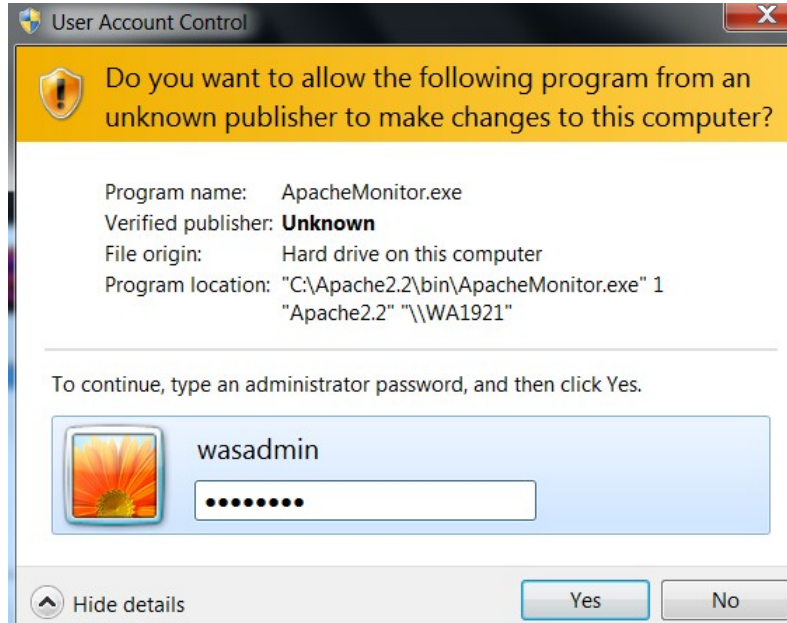

__21. Right click the task bar and select **Open Apache Monitor**.

__22. The **Open Apache Monitor** window will open then click **Stop**.

__23. Enter the admin password if it is required and click **Yes**.

__24. The server will stop, click **Start**.

The server will be started again.

Note. If you were asking for password to stop the server means that you need to configure the user to allow the student starting the server without asking permissions or you need to provide the admin password to the student to be able to stop and restart the server because this is required during the labs.
